Abstract (en)
[origin: WO2012084354A2] The invention relates primarily to a discharging device (10) for liquids. Said device has a pump chamber (64) which is delimited by two valves (62, 66), each valve having a valve body section and a valve seat. The corresponding channels (60, 80) are concentrically arranged, and a fixing region of a valve body (80) of one or both valves is fixed to a partition (24b) between the channels.
