Abstract (en)
[origin: WO2012084159A1] The present invention relates to a grinding machine (10) for operative cylinders, of the type comprising a piece-holder head (13) and a tailstock centre (12) between which an operative cylinder is positioned for being ground, said machine (10) comprising moving means (16, 90, 97) associated with both the piece-holder head (13) and the tailstock centre (12) to allow them to be moved along a common movement direction. A further object of the present invention relates to a grinding method.
