Abstract (en)

[origin: WO2012084355A1] The invention relates to a drive device for a vehicle window wiper device, wherein a stop device limiting the angle of rotation of the reciprocating driven drive shaft is formed in that a leg spring (20) is carried along in the corresponding direction of rotation thereof by the output side transmission element (3) connected to the drive shaft, the spring leg (22, 23) thereof currently contacting one of the housing-side stop parts (26, 27) located in the curve region (29) between the spring legs (22, 23) being pivoted opposite the corresponding direction of rotation of the output side transmission element (3).
