Abstract (en)
[origin: WO2012084518A1] The invention relates to an elevator car floor in composite structure or sandwich design, consisting of at least one base plate (1), a cover plate (2) and at least one composite structure core (3) which is arranged between the two plates and comprises at least two chambers, wherein the composite structure core (3) is rigidly connected to the base plate (1) and the cover plate (2). According to the invention, at least one of the at least two chambers of the composite structure core (3) is filled at least partially with a filling compound, wherein at least two chambers of the composite structure core are filled to differing levels in order to balance the elevator car.
