Abstract (en)
[origin: WO2012084816A1] The lifting device according to the invention comprises a carriage (16) and a lifting unit (17), which are connected to each other by means of linear guides (29, 30). The carriage (16) comprises two side parts (19, 20), which can be adjusted with respect to the distance of the side parts relative to each other by means of a distance adjustment device (36). The side parts are centered with respect to the lifting unit (17), in particular with respect to the pulling means originating from the lifting unit (17), by a centering device (45).
