Abstract (en)

[origin: WO2012085237A1] The invention relates to a device for cleaning a jet strip of a hydro-entanglement device for textile fabrics, having the following characteristics: a conveying apparatus for the jet strip in order to transport the jet strip in the longitudinal direction; a spraying apparatus for water under high pressure, by means of which spraying apparatus the strip is acted upon in the area of the openings of the strip; and a suctioning apparatus, which lies opposite the spraying apparatus. According to the invention, two spraying apparatuses (DO, DU) arranged one after the other in the conveying direction are associated with the jet strip (D), wherein both sides of the jet strip (D) can be acted upon one after the other by the two spraying apparatuses (DO, DU).
