Abstract (en)

[origin: WO2012085773A1] The invention relates to a security element comprising a substrate provided with a first face equipped with an optical structure and with a second face, characterized in that it comprises at least a first pattern and a second pattern inscribed on the second face of the substrate, the first pattern being observable through the optical structure along a first angle of observation at a first position on the second face, the second pattern being observable through the optical structure along a second angle of observation, different from the first angle, at a second position on the second face that is different from the first position, the first pattern and the second pattern being at least partially identical.
