Abstract (en)

[origin: WO2012085486A1] The invention relates to a method for modifying a structure with a reinforced floor, said structure comprising: an embankment, a first facing including an outer surface defining the front surface of the structure, and at least one stabilisation element connected to the first facing and extending in a reinforced area of the embankment located to the rear of the front surface of the structure. According to the invention, the modification method includes the following steps during which: a second facing is arranged along the length of the outer surface of the first facing, the stabilisation element is disconnected from the first facing, and the stabilisation element is connected to the second facing.
