Abstract (en)
[origin: GB2486723A] Shuttering for use in casting a slab/beam over a substrate comprises a hollow support structure including a plurality of spaced apart support walls 7, 8 defining cells 6 therebetween. The support structure is able to be placed on the substrate to support the slab/beam during casting and is formed with its spaced apart walls by a moulding process. The cells 6 are of a substantially hexagonal shape. The shuttering allows upward movement in the substrate, e.g. clay heave, to be accommodated the collapsible nature of the support walls 7, 8, 9
