Abstract (en)

[origin: WO2012085123A1] For a spacer (410) for insulating-glass units having two or more panes, said spacer being made of a nonmetallic material having low thermal conductivity, the nonmetallic material is formed by a molded channel part (411) made of a fiber composite material made of natural materials in order to further optimize the thermal insulation. A partial casing of the spacer or of the material thereof serving as an adhesive bridge is provided for compatibility with an insulating-glass edge connection system.
