Abstract (en)

[origin: WO2012084429A1] The invention relates to a method for controlling an internal combustion engine for considering fuel properties, comprising taking a particularly action if a particular behavior of the internal combustion engine is detected, checking whether a fuel tank connected to the internal combustion engine has been filled after the action was taken, checking whether fuel from the fuel tank has reached the internal combustion engine after the fuel tank was filled and whether the particular behavior of the internal combustion engine is no longer present, and ending the particular action if the preceding conditions have been met. The invention further relates to a computer program product having program code performing the method, that can be used by implication in existing internal combustion engines, without additional components needing to be installed in the internal combustion engine. Only the control software must be adapted by downloading the computer program stored on the computer program product into an engine control unit, for example.
