Abstract (en)
[origin: WO2012084314A1] The invention relates to a device for displaying multiple times, including a first time-displaying member (1) and a second time-displaying member (2) constituting first elements, and a first means for indicating at least one time on the first time-displaying member (1) and a second means for indicating at least one time on the second time-displaying member constituting second elements, wherein the first (1) and second (2) time-displaying members have a common axis. The first and/or second means for indicating at least one time is arranged between the first time-displaying member (1) and the second time-displaying member (2), and the first and/or second elements are mounted so as to be rotatable about said axis relative to each other at the same rotational speed, wherein the time that can be displayed on the first time-displaying member (1) is different from the time that can be displayed on the second time-displaying member (2).
