Abstract (en)

[origin: WO2012085410A1] The invention relates to processing a signal in the form of consecutive sample blocks (TR_j, TR_j+1), the method comprising filtering in a transformed domain of sub-bands, and particularly equalization processing (T₀), applied to a current block (TR_j) in the transformed domain, and filtering-adjustment processing (T₁, ?'1) that is applied in the transformed domain to at least one block (TR_j-1, TR_j+1) adjacent to the current block.
