Abstract (en)

[origin: WO2012085410A1] The invention relates to processing a signal in the form of consecutive sample blocks (TR<sub>j</sub>, TR<sub>j</sub>+1), the method comprising filtering in a transformed domain of sub-bands, and particularly equalization processing (T<sub>0</sub>), applied to a current block (TR<sub>j</sub>) in the transformed domain, and filtering-adjustment processing (T<sub>1</sub>, ?'1) that is applied in the transformed domain to at least one block (TR<sub>j</sub>-1, TR<sub>j</sub>+1) adjacent to the current block.
