Abstract (en)

[origin: WO2012084131A2] The invention relates to a method and device (1) for charging a low-voltage battery (2) in an electric drive system, comprising at least one high-voltage battery (3), at least one low-voltage battery (2), at least one DC/DC converter (5, 11), units (6, 7) for determining the state of charge of the low-voltage battery (2) and of the high-voltage battery (3) and at least one control unit (8) for the DC/DC converter (5, 11), wherein the device has at least one connection (9) to an external voltage supply, wherein by means of the unit (6) the state of charge of the low-voltage battery (2) can be determined and can be compared with a threshold value and by means of the control unit (8) the connection (9) to the external voltage supply (10) can be checked, wherein depending upon the state of charge of the low-voltage battery (2) and the connection (9) to an external voltage supply (10) a charging path from the external voltage supply (10) via the DC/DC converter (5) to the low-voltage battery (2) can be activated by the control unit (8).
