Abstract (en)

[origin: WO2012085040A1] The invention relates to a method for managing services on a network (10), comprising: at least two interconnected computer sites (12, 14, 16, 18), each of which is capable of implementing at least one service that can be accessed from the network; at least one service implemented on a network site (12, 14, 16, 18); and a means (38) for transferring a service from an initial site to a separate destination site. Said service is associated with security attributes, and the method comprises transferring at least one service from an initial site to a destination site of the network according to a predetermined transfer sequence which depends on the security attributes.
