Abstract (en)

[origin: EP2656884A1] The ski fitting has a toe holder for movable holding of a front portion of a shoe and a heel holder (10). The heel holder has a base (2) connected with a ski (1) and a bearing structure which rises from the base in a vertical direction of the ski fitting. A projecting support unit (4) is provided, on which a rear portion of the shoe is supported in vertical direction. A holding down clamp (6) is movable to and fro between a closed position and a release position relative to the bearing structure. A spring unit is provided against whose restoring force the holding down clamp is movable from the closed position into the release position.
