Abstract (en)

[origin: EP2656916A1] The method involves releasably connecting a syringe (3) with a pipette (1). The information related to residual liquid dosing process is optionally set and displayed in an electronic display device (9). The maximum possible number of execution of liquid dosing process is displayed in display device, without refilling the syringe. The liquid dosing process is executed, after filling the syringe with liquid. The number of times of executed dosing processing is determined, so that maximum possible number of liquid dosing process is determined, without refilling the syringe. An independent claim is included for a pipette.
