Abstract (en)

[origin: EP2656969A1] The assembly (1) has a machining surface that includes an edge and another edge that is opposed to the former edge. A frame (2) is intended to be fixed with regard to a support (3). A machining device is connected to the frame, and includes a machining tool (41) comprising an abrasive band (41'). A displacement device (4) moves the band to three positions, where the band is in contact with the latter edge of the machining surface to machine a concrete block in one position. The displacement device is arranged with a trolley (10). An independent claim is also included for a correction post.
