Abstract (en)
Provided is a cable management apparatus for an elevator, which enables a cable extending in a hoistway to be easily mounted to a predetermined base. The cable management apparatus includes: a supporting member (4) for supporting a cable (3) extending in a hoistway; and a base (1f) to which the supporting member is fixed. At least one projecting portion (4a) including an expanded-diameter portion having a diameter larger than a diameter of a base portion is provided to one of the supporting member and the base. A fastening hole (13), through which the projecting portion is to be inserted, is provided to another of the supporting member and the base so as to correspond to the projecting portion. The fastening hole includes a passage portion and a retaining portion. The passage portion has a size which allows the expanded-diameter portion of the projecting portion to pass therethrough. The retaining portion has a size which prevents the expanded-diameter portion of the projecting portion from passing therethrough and allows the base portion to pass therethrough.
