Abstract (en)
A locking device including a first member, for example a grip, that is removably connected to a second member, for example the body of an inline socket or plug, by connecting means such as a thread, and a device for locking the movement of the first member with respect to the second member; the locking device includes an actuation screw that controls the position of a bolt member that has at least two operating positions: a locking position, in which the bolt member interferes with the movement of the first member with respect to the second member, and a release position, in which the bolt member does not interfere with the movement.
