Abstract (en)

[origin: EP2657792A1] A holographic imaging device (100) for imaging an object under study (104) comprises a reflective surface (103), at least one radiation source (102) for directing a radiation wave (107) towards said reflective surface (103) and the object under study (104), and an image sensor (101) arranged to receive said radiation wave (107) when reflected by said reflective surface (103) and by said object under study (104). The image sensor (101) is adapted for determining an interference pattern between said radiation wave (107) reflected by the reflective surface (103) and said radiation wave reflected by the object under study (104). The holographic imaging device is adapted for directly directing the radiation wave reflected by the object under study (104) towards the image sensor (101).
