Abstract (en)

[origin: EP2657915A1] The device has a transport device (4) comprising a primary transport unit (5) and secondary transport unit (6) which move the print media parallel to the printing face and move in orthogonal direction relative to the printing face in order to guide print medium on the transport units. The transport units are moved independently of one another in the orthogonal direction relative to the printing face. A transfer area is located in the printing area of the printing face so that print medium in transfer area is transferred from primary transport unit to secondary transport unit. An independent claim is included for method for serial printing of print media.
