Abstract (en)

[origin: EP2579393A1] The invention relates to an electrical connection assembly (1) and an electrical element (20) comprising an electrical connection assembly (1). Prior methods of making an electrical connection between two conductors either require a third element, expose the two conductors to heat or are not reliable. The invention overcomes these disadvantages by using a first conductor (2) having a hole (4) into which a second conductor (3) with an elastic spring section (5) is inserted.
