Abstract (en)
The invention relates to a connector with a housing with a plug opening for receiving an electrical plug and with a cable opening for receiving a terminal of a conductor of a cable, whereby a middle axis of the plug opening and a middle axis of the cable opening are disposed in a predetermined angle, whereby the cable opening leads in a chamber, whereby the plug opening passes over via an opening face in the chamber, whereby the chamber is arranged along a longitudinal axis of the cable opening, whereby the chamber extends opposite to the cable opening in the longitudinal axis of the cable opening over the opening face, providing a space beside the opening face for receiving a front part of the terminal.
