Abstract (en)

[origin: EP2658289A1] The method involves determining a characteristic value (m1) with respect to the language in the signal of the microphone device in a direction, and determining another characteristic value (m2) with respect to the language in another signal of the microphone device in another direction. A control value is extracted from the two characteristic values, and the alignment characteristic of the microphone device is controlled on the basis of the control value. An independent claim is included for a hearing aid with a control device.
