Abstract (en)

[origin: WO2012089514A1] The present invention relates to a dishwasher (1) comprising a tub (2) wherein the washing process is performed, an air channel (6) located outside the tub (2), both ends of which are connected to the tub (2), an inlet port (3) which provides the air in the tub (2) to enter the air channel (6), an outlet port (4) which provides the air in the air channel (6) to return back to the tub (2), a fan (5) which sucks and delivers the air in the tub (2) to the air channel (6) and a thermoelectric module (7) disposed in the air channel (6), having a cold side (8) that provides the dehumidifying air to be condensed and a hot side (9) that provides it to be heated, and the dehumidification performance of which is increased.
