Abstract (en)

[origin: WO2012092919A2] The invention relates to a computer-based dialogue system for use in dialysis, consisting of an evaluation unit, a memory unit and a touchscreen. This computer-based dialogue system allows the treating physician to display all patient-relevant and dialysis-relevant parameters in an intuitive manner. This makes it much easier for the physician to supervise the patient and to intervene in a manner specific to the patient if complications arise during a dialysis session.
