Abstract (en)

[origin: WO2012091660A1] The present invention relates to an attachment means (2; 100; 200) for arranging a device (4), such as light fittings, in a recess (8) of a layer (8). The attachment means (2; 100; 200) comprises a roller-type spring (16), and spring releasing means (24, 42, 58; 108; 209). A first end (28) of the spring (16) is attached at a first section (20; 110; 210) of a surface of an elongated body (18; 101; 201) and/or to a surface of the device (4). A second end (30) of the spring (16) is detachably arranged to a second section (22; 112, 212) of the surface of the body (18; 101; 201) and/or of the device (4) when the spring is unrolled. The spring (16) is rolled up, when the spring is detached by the releasing means (24, 42, 58; 106; 209) from the second section (22; 112, 212) of the surface of the body (18; 101; 201) and/or of the device (4). The present invention also relates to light fittings comprising at least one of said attachment means. Further, the present invention relates to the use of a roller-type spring in said attachment means or in said light fittings, as well as a method for mounting of said light fittings.
