Abstract (en)

[origin: WO2012089686A2] The present invention relates to a cooling device (1) comprising a refrigeration volume (3) wherein the foodstuffs to be cooled are placed, at least one body (2) having an outer wall (4) separating the refrigeration volume (3) from the outside environment and an inner wall (5) with heat insulating material injected between itself and the outer wall (4), a compressor (6) providing the refrigerant to be compressed, and a condenser (10) providing the refrigerant leaving the compressor (6) as superheated vapor to change into liquid phase by condensing.
