Abstract (en)
[origin: WO2012089481A1] The invention relates to an electrical line for connecting two electrical devices, comprising a first segment having a predetermined first length and a first impedance and a second segment having a predetermined second length and a second impedance. The first segment is thereby adjacent to the second segment and the impedances of the adjacent segments are different, so that a change in impedance exists in the region of the adjacent segments.
