Abstract (en)

[origin: EP2660006A2] The device has outer toothed workpiece holders (WH1-WH5) that are horizontally placed between inner and outer pin rings (2,3), and vertically placed between horizontally superposed brushing discs (5). Workpieces (W1-W5) arranged in engagement portions (E1-E5) of workpiece holders are fixed manually at lower brushing disc. Brush retainers of brushing discs are equipped with brushes. The number of workpiece holders is defined dependent on size of pin rings. The number of engagement portions is defined dependent on depth and diameter of workpieces.
