Abstract (en)

[origin: EP2660172A2] The press has a wrong sheet sensor comprising a measuring unit (11) for detecting a wrong sheet e.g. twin sheet. The measuring unit is associated with moving substrate sheets (B1-B3). A timing roller (3) sequentially conveys the substrate sheet, which is isolated from a sheets stack. A processing machine is provided in combination with a band roll (2) associated with a band desk (1) and/or a carrier roll. The measuring unit is provided for instrumentation acquisition of a support height (X) of the timing roller, the band roller or the carrier roller.
