Abstract (en)

[origin: EP2660397A1] The system has a valve (1) e.g. 3/2-way valve, arranged in a domestic water pipe system (6), where water is fed based on a level (11) of the water in a container (5). The valve completely or partially opens a water path and partially blocks supply of the water to the pipe system in a direction of a domestic water consumer (12) in a switching or operating position. The valve blocks the water path in the container or throttles amount of flowing water and completely or partially opens the water path in the pipe system in direction of the water consumers in another switching or operating position.
