Abstract (en)

[origin: EP2660473A1] The pump has an impeller (10) including a suction port, a sealing surface (14) annularly surrounding the suction port and a bearing on a stationary seal (18). A groove (28) is formed in the sealing surface, and extends beyond a bearing-contact region of the stationary seal on the sealing surface. The groove includes an end (30) in connection with an impeller side chamber and an opposite end (32) in connection with a suction side of the impeller. A surface (34) of the seal is arranged in the impeller side chamber adjacent to the stationary seal for producing turbulences.
