Abstract (en)
A 3D dynamic displayer includes left and right stationary towers (1), and a truss axis disposed on both left and right stationary towers (1) separately and having an elevating device and penetrating through the center positions of a plurality of movable components (2). Both ends of the truss axis are coupled to the elevating device, and a display screen or a medium for projecting an image is disposed on a surface of the stationary tower (1) or the movable component (2). The display screen, the elevating device and the truss axis are coupled to a control system for controlling the display screen to display different images, ascending or descending the movable components (2) along the control system, or rotating the movable components (2) about the truss axis clockwise or counterclockwise for different angles at the same or different time. The 3D dynamic displayer provides a combination of changes according to design requirements.
