Abstract (en)
[origin: EP2661027A1] A method for forwarding message is provided in an embodiment of this invention, comprising: receiving, by a forwarding plane device, a first message, and looking up a first entry matched with the first message in a flow table of the forwarding plane device, wherein the forwarding plane device is a device compliant with a network architecture in which control and forwarding are separated; performing, by the forwarding plane device, a first operation on the first message for limiting its message forwarding rate according to the first entry. Further, a corresponding device is also provided in an embodiment of this invention. With the technical solutions provided in embodiments of this invention, the forwarding plane device can put limits on its message forwarding rate.
