Abstract (en)  
It is an object of the present invention to provide a goods supply apparatus enabling a reduction of the number of components required for goods selection and space saving while having good operability. A goods supply apparatus is capable of supplying a plurality of types of goods selectively, and includes: goods selection means operable by both of a rotary operation and a pushing operation; goods display means that displays information on the plurality of types of goods; goods specifying means that specifies any of the plurality of types of goods in response to a rotary operation to the goods selection means; and goods decision means that, in response to a pushing operation to the goods selection means in a state of specifying the goods by the goods specifying means, decides the goods as goods to be supplied. The goods to be supplied decided by the goods decision means is supplied.
