Abstract (en)
[origin: EP2662298A1] The device (120) has two packing elements (2, 3), where each packing element comprises origin walls (21, 22, 41, 42) and origin flaps (82, 92) that are hinged to the origin walls. Three intermediate flaps are hinged to external walls (11, 12, 31, 32), where each intermediate flap is obtained by joining two origin flaps of the two respective packaging elements. A packaging line fixes the device to a dissociation after fixing by volume of each intermediate flap into end flaps (81, 83, 84, 91, 93, 94) to obtain multiple packing apparatuses. An independent claim is also included for a method for manufacturing an intermediate device.
