Abstract (en)

[origin: EP2662510A2] The assembly has a frame structure (1), and doors (21-25) moving in translation, where the assembly is flexible between an open configuration in which the doors are separated from the structure and a closed configuration in which the structure and the doors cooperate with each other to form a closed volume. The structure includes a reinforcement forming a closure element at an upper part. The doors are provided with an anti-swing unit formed of crutch and counter weight and/or bearing unit i.e. boot door, at lower parts. An independent claim is also included for a method for assembling a furniture assembly.
