Abstract (en)

[origin: EP2662751A1] The present application discloses a method and device for an electronic terminal to realize desktop switching, and the electronic terminal thereof to avoid monotonous desktop switching through screen sliding and to enrich the functions of the electronic terminal. The method includes that: a current motion state of an electronic terminal is acquired by way of an acceleration sensor arranged in the electronic terminal; a primary desktop switching mode corresponding to the current motion state is determined according to a stored corresponding relation between a motion state and a desktop switching mode; and desktop switching is performed according to the primary desktop switching mode.
