Abstract (en)

[origin: WO2012042066A1] In a device (1) for holding a number of fish (21-24) to be prepared in an orientation in which the stomach side (B) of the fish (21-24) is directed upwards, it is provided that the device (1) has a basic structure (2) which can be positioned on a horizontal surface (E) and/or can be suspended on a holding structure (26) by means of a suspending means (25) arranged on the device (1), and that the device (1) has, for each fish (21-24) to be held by way of the device (1), a plurality of spikes (5a-5d, 6a-6d, 7a-7d, 8a-8d) which are oriented parallel to one another and project by way of a free end from the basic structure (2) such that a fish (21-24), the side flanks of which have been skewered via the free ends of the spikes (5a-5d, 6a-6d, 7a-7d, 8a-8d) assigned to it, can be held on the device (1) with its stomach side (B) directed upwards and in the process in a manner in which only the spikes (5a-5d, 6a-6d, 7a-7d, 8a-8d) assigned to the fish (21-24) are in contact with the fish (21-24), wherein a first number (5a-5d) of spikes for holding a first fish (21) and a second number of spikes (8a-8d) for holding a second fish (24) project from sides of the basic structure (2) that are directed away from one another.
