Abstract (en)
[origin: WO2012095606A1] Device (1) for bringing a mobile conductor carried on a hanger (8) of a vehicle of a mechanical lift installation connected to a cable (7) by the hanger (8), into contact with a conductor connected to an end station of the mechanical lift installation, characterized in that the device (1) comprises at least one conductor suspension means connected to the end station by a pivot connection (P1) allowing the conductor to be brought into contact with the conductor irrespective of the inclination of the hanger (8).
