Abstract (en)

[origin: WO2012095603A1] The invention relates to a ready-to-assemble assembly for producing a corner part (2'') for baseboards or moldings, said assembly comprising two profile sections (2', 2'') and at least one corner bracket (3) that can be used to assemble the two right-angled profile sections (2', 2'') so as to form the corner part (2''). Preferably, the straight cross-section of each profile section (2', 2'') of the corner part can have a transverse profile that is symmetrical to the center of symmetry (O), such that the corner part (2'') can be used both as a re-entrant corner part and as a salient corner part.
