Abstract (en)  
[origin: WO2012095266A1] The invention relates to an arrangement (100) of flat transparent elements (1, 2, 3, 4), in particular an arrangement consisting of a first flat transparent element (1) and a second flat transparent element (2) which is arranged in a plane-parallel manner with respect to the first flat element (1) and which is spaced from the first flat element (1) via a spacer (5) such that an intermediate space (10) which is delimited by the first and second flat element and by the spacer is formed. The arrangement (100) according to the invention further has at least one segment (6, 16) that is connected to the spacer (5) for receiving lines (7) and/or lighting means and/or for ventilating and/or exhausting the intermediate space. Said at least one segment (6, 16) that is connected to the spacer (5) projects into the intermediate space (10) of the flat transparent elements (1, 2) such that at least one physically separate region (11a, 11b) is formed for receiving said components.
