Abstract (en)
[origin: WO2012095434A1] Depending on the concrete operating situation and the composition of the fuels used for driving the internal combustion engine, the rotor blades, the guide device and the turbine housing parts of the exhaust gas turbine are soiled sooner or later. According to the cleaning method of the invention for wet cleaning an exhaust gas turbine, the amount of cleaning liquid injected into the flow channel of the turbine via a nozzle is varied over time by a defined, average amount of cleaning liquid.
