Abstract (en)  
[origin: WO2012096784A1] A unitary one piece badge holder for attachment to a garment, e.g., fabric pocket. The holder includes a substantially planar clip body having a front and rear surface and side edges. An opening in the clip body passes through the front and rear surfaces forming a periphery structure in the clip body. The structure has an interior wall surrounding the opening. A substantially planar flexible central spring member having front and rear surfaces and a surrounding edge surface appends from a top portion of the periphery structure. The opposing free end terminates within the opening near a bottom portion of the structure. The spring member and periphery structure are within the same plane. The gap between the surrounding edge surface of the spring member and the interior wall of the periphery structure decreases in width.
