Abstract (en)
[origin: WO2012095613A1] The invention relates to methods, systems, and devices, including computer programs encoded onto a computer storage medium, with a view to searching for information. According to one aspect, a method includes the steps of: receiving a search query in a search interface; determining that the search query is a flight-related query; and, in response to determining that the search query is a flight-related query and with no further input from the user, providing a flight search interface including a plurality of search criteria and a plurality of flight search results, each criterion relating to a flight search attribute and each criterion having a related value, one or more criterion values corresponding to values extracted from the search query, and the plurality of flight search results being filtered in accordance with the criterion values.
