Abstract (en)  
[origin: US2012272154A1] A service distribution device is provided that, when acquiring services to be used in an information terminal mounted in a vehicle or used in its passenger compartment, recognizes service availability beforehand, thereby improving usability of the services. A service distribution device includes an information correlation unit for correlating information that denotes service utilization conditions in relation to travel condition of the vehicle with the services. The service distribution device distributes to an information terminal the information that denotes the service utilization conditions correlated by the information correlation unit along with contents of the relevant service so that the information and the contents can be visibly displayed on a display unit in the information terminal.
