Abstract (en)  
The object of the present invention relates to a stackable box of the type provided with an approximate regular-prismatic configuration, opened by its upper side, whose bottom and lateral walls are made up by nerves that define apertures; in the box, the corners are made up by support columns, which comprise in their upper part: orifices, a horizontal end wing and a second horizontal wing located underneath the horizontal end wing, and protruding further than the horizontal end wing; and the lower part of the columns has extremities which are fitted in the orifices, a horizontal support extension in the horizontal end wing, and the edge of the horizontal extension is elongated along a support flap in the second horizontal wing, when being stacked on a lower box.
